

JUST.
EXCELLENCE IN
STANDARDIZED
LIGHTING
TECHNOLOGY.

Powered by Innovation.

JUST. POWERED BY INNOVATION.

COLOR COMMUNICATOR

colorCommunicator, the world's first standardized viewing booth with the JUST USB interface is a professional solution for the classic reproduction workflow. Uniform and glare free illumination is made possible by the curved viewing surface.

COLOR FRAME

A desktop viewer, as required by today's work environment: functional "laptop" design, easy operation, excellent lighting. colorFrame is portable, with a retractable lamp section and a handle. Available in two sizes with or without an optional dimmer for soft-proof applications.

Get control of your color! Apart from the measurement procedures to control color, the visual inspection of printed products, objects or surfaces is essential. Therefore, controlled lighting conditions in accordance with the international standards are important to avoid incorrect assessments. The specially developed fluorescent tubes, JUST daylight 5000 proGraphic ISO 3664:2009 combined with the JUST technology conform to the strict criteria required by ISO 3664:2009 and achieve peak performance in terms of color coordinates, color rendering index and metamerism index.

LED LIGHT COLOR VIEWING XL HYBRID

The multi-spectral LED technology is able to simulate and program every possible lighting situation. NEW: detection of metamerism with three additional TL84 fluorescent lamps!

PROOF STATION SP

The proofStation-SP offers the perfect solution for the digital workflow. By default the standard version is equipped with digital dimmer and USB interface. Ideally suitable for softproof on press applications with the adJUST monitor calibration software.

CHALLENGE 5000

JUST Normlicht's price-attractive proof station for sheet sizes up to 100x140 cm and designed to fit perfectly into conference rooms, prepress studios or advertising agencies.

With the use of LED technology, JUST Normlicht is setting forward-looking standards in visual color matching. JUST has now successfully developed a multispectral LED illuminant (pat.pend) that is able to reproduce many different light spectrums with exceptional accuracy. This multispectral LED illuminant can simulate many standard illuminants including D50, D65, A, C, D55, D75, and virtually any other light source. Due to a unique calibration method (Pat. pend.) JUST guarantees consistent spectral properties and calibrated lighting conditions for years. **JUST. Powered by Innovation.**

ORIGINAL REPLACEMENT TUBES FROM JUST.

daylight 5000 proGraphic, exclusively designed for JUST, are the only fluorescent tubes worldwide with exceptional standardized lighting quality. Read here for why this is important.

The ISO 12647 standard establishes strict quality parameters throughout the complete digital workflow in the graphic arts industry. Besides existing technical measuring procedures for color control, the visual control of printed products plays a decisive role. This is why standardized light conditions complying with ISO 3664:2009 are fundamental to prevent discrepancies in color assessment.

Choosing the right fluorescent tube is critical to create the right light conditions for color evaluation purposes.

The high quality fluorescent tubes, JUST daylight 5000 proGraphic, create optimum viewing conditions for critical color assessment.

The only fluorescent tube on the market that fully complies with the critical demands of ISO 3664:2009 in terms of:

- **Color coordinates**
Tolerance of only 0,005 and an even distribution of spectral lines.
- **Color temperature**
5000 Kelvin and a high color rendering value of Ra8 > 98 (exceeding the established value of Ra > 90).

- **Metameric index**
By far lower than 1.

- **Innovative production process**
The only fluorescent tubes on the market to be produced with a 4-band technology. Light color is produced with 4 different phosphors, thus greatly improving spectral properties.

- **Certified light quality**
Every daylight 5000 proGraphic tube is accompanied by a measuring certificate which verifies its exceptional light quality.

- **No. 1 in environmental awareness**
JUST is again a step ahead when it comes to environment protection: daylight 5000 proGraphic contains less than 5 mg mercury in each tube.

- **Technical consultancy**
Our qualified experts will be glad to evaluate the light conditions in your workplace.
Please inquire!

For JUST viewing devices with TLSI technology

Automatic warning for relamping after 2500 hours of light bulb use. Green light indicates: up to 2300 hours of use, tubes are within ISO 3664:2009 compliance. Yellow light: Less than 200 hours of use remaining, order replacement tubes. Red Light: Replace tubes!

Relamping

After 2500 hours of service, fluorescent tubes diminish their color temperature. In order to provide consistently accurate and reliable viewing conditions, JUST Normlicht requires relamping every 2500 hours.

For viewing devices with no hour counter simply mark the next date for relamping on the attached label according to the following schedule: Single shift = once per year, two shifts = every 6 months, three shifts = every 4 months.

For viewing devices with hour counter simply mark the time limit on the attached relamping-label by adding 2500 to the number of actual service hours.

Certified viewing conditions – made by JUST.

Spectral light distribution with a new, improved UV-content

Test protocol reveals that the fluorescent lamp JUST daylight 5000 proGraphic fulfills the strict criteria for standardized lighting according to ISO 3664:2009.

GL OPTIC SPECTRAL LIGHT MEASUREMENT

The right tool for light assessment as required by ISO 3664:2009.

Starting in 2009, under the brand of GL Optic, JUST has developed and distributed a complete line of precise light measuring devices. Recently introduced the GL Optic MINI spectrometer measures light according to the ISO 3664 standard. This high-quality, easy to use device gives you everything you need for reliable, consistent light measurement. The device is immediately ready to use once it is connected to your Windows PC. Thanks to its high sensitivity and accuracy, it is the ideal solution in for accurate light measurement.

GLspectrosoft is an intuitive software for complete evaluation of the measured spectra according to all applicable standards, such as ISO 3664:2009.

GLspectrosoft is laboratory software for complete spectral analysis. It is intuitive and easy to use software that offers many possibilities.

Item No. 102095

GL Optic MINI spectrometer

An easy to use light meter with unprecedented performance in this class of spectral measurement devices.

Item No. 67827

GL Optic display sensor

For monitor calibration, contact or distance measurements.

Item No. 93047

Features:

- High sensitivity and precise calibration
- Low noise and stable measurements
- Ready to work when connected to PC after approximately 10 min
- Small size and low energy consumption
- Powered via USB connection

Applications:

- ISO 3664:2009 compliance test and audit
- Measurements of different light sources: halogens, fluorescent lamps
- LED measurement
- Display measurement

COLOR FRAME

The low cost entry into the standardized lighting technology – new design, easy to use and with superior illumination: **JUST colorFrame**: Ideal for photographers, advertising agencies and prepress studios.

Available in two sizes, with magnetic rear wall and optional dimmer for soft proofing applications.

Functional "laptop" design with convenient operation:

foldable lamp with built in carrying handle for easy transportation, worldwide use with multi-voltage ballasts, optional dimmer for soft proofing applications.

COLOR COMMUNICATOR

JUST colorCommunicator is the world's first viewing booth that communicates via the JUST USB interface with a monitor calibration software to precisely match the softproof on the monitor and the hardcopy in the viewing booth.

Devices with the **JUST USB Interface** are equipped with a digital display for brightness control and hour meter for the next tube change.

The software: adJUST monitor calibration

Based on the award-winning monitor profiling solution basiCColor display, the adJUST monitor calibration software makes it possible, for the first time, to precisely calibrate the intensity of the standardized lighting along with the monitor and to test the results for continued accuracy. Possibility of measuring and assessing ambient light and viewing booths (with compatible instruments) according to ISO 3664 : 2009 and ISO 12646.

COLOR VIEWING LIGHT

Color Viewing Light provides consistent criteria for visual quality control with up to five different illuminants.

The continuous tube monitoring and convenient warning of necessary tube changes guarantees consistent viewing conditions.

Color Viewing Light 3 BASIC Article 200692

Outside dimensions:
W 70, D 43, H 47 cm
Usable space:
W 64, D 36, H 33 cm
With 3 different light colors.

Replacement bulb set
Item # 1719

Color Viewing Light S ADVANCED Article 200144

Outside dimensions:
W 70, D 43, H 51 cm
Usable space:
W 64, D 36, H 33 cm
With 5 different light colors.

Replacement bulb set
Item # 1198

The five standard illuminants:

 **D65** Northern daylight for visual matching in accordance with CIE, ISO 3668 and DIN 6173-2 and other standards

 **A** Incandescent lighting such as in the home, hotels and restaurants

 **TL84** (F11) Typical lighting for offices, showrooms and exhibitions

 Equipped as standard with **D50** Daylight for color matching in the graphic arts industry

 **UV-A** for the detection and assessment of materials with optical brighteners, fluorescent dyes and whiteners

LED TECHNOLOGY

Precise, controllable lighting conditions for an exact match between a proof or original samples – important in many industries such as, textiles, plastics, automotive, furniture and graphic arts to ensure reliable color decisions.

JUST Normlicht has developed a multispectral LED illuminant (Pat. pend.) that is able to reproduce many different light spectrums with great accuracy. In addition to the standard illuminants D50, D65, A, C, D55 and D75, virtually any other light source can be simulated in with excellent quality – The unique JUST LED calibration method (pat.pend.) guarantees consistent spectral properties for sophisticated industrial applications for many years.

LED colorControl

The multi-spectral LED technology provides a perfectly controlled lighting environment for the visual comparison of an original or a proof and a production sample.

With JUST LEDcontrol
any light source
is controlled in an
excellent quality.

LED COLOR CONTROL

LED COLOR VIEWING LIGHT XL HYBRID

Perfect creation of multiple light spectra for immediate recognition of metameric failures.

* PROFESSIONAL Version only

LED Color Viewing Light

LED Color Viewing Light has the ability to simulate and program any conceivable lighting environment: In addition to the standard illuminants D50, D65, A, C, D55 and D75 virtually any other light source can be simulated with excellent quality. The multi-spectral LED even includes the proper UV content to show fluorescence (OBA's). In the hybrid model metamerism caused by mercury peaks can be identified by using three additional TL84 fluorescent lamps.

LED COLOR PROOF LIGHT XL HYBRID

LED Color Proof Light

The proof light hanging from the ceiling has the ability to simulate and program different light sources to illuminate larger areas – in the meeting room as well as in the laboratory. In the hybrid model, metamerisms caused by mercury peaks can be identified by using three additional TL84 fluorescent lamps. For larger areas multiple lamps can be easily connected together and controlled by one computer and software.

LED control software professional allows the selection and reproduction of any light source – standard illuminants such as D50, D65, A, C, D55, D75 but also any other light source – free choice of color temperature or chromaticity coordinates out of the available gamut. The selected illuminant can be saved and recalled at any time with consistent spectral properties for years.

MODULIGHT 5000

If you have a small meeting room or a complete print shop the moduLight is flexible enough to fit into every room situation and creates standard lighting conditions where ever they are needed.

moduLight offers unmatched light quality illumination and uniformity. With the specially developed prismatic lenses gloss and glare are non-existent. Optionally available with digital dimming, JUST USB interface and adJUST monitorCalibration software – for soft proofing on press applications.

TLSI Technology – integrated LED field with easy to understand signal technology. Automatic warning for relamping after 2500 hours of light bulb use.

Digital dimmer with USB interface and software adJUST monitor calibration for softproof-on-press applications (optional).

MODULIGHT 05

CONTROL STATION CTP PRO

Control Station CtP Pro – makes spot checks of CtP- and conventional Offset Plates more efficiently and safely.

Today, quality control becomes much more important during all digital prepress steps, especially with the process of computer to plate. The printing plate is the last and sometimes the only visible hardcopy that can be checked before starting the printing press.

- Comes with an asymmetrical proof light for even illumination of the plate
- Vertical control panel allows comfortable and easy positioning of plates
- Magnifying glass with comfortable hand rest support
- Magnifying glass moves smoothly in vertical and horizontal directions
- Manual height adjustable plate board for comfortable working in upright position
- Adjustable slanted plate board can be used for color matching of press sheets under standardized lighting conditions.

With the wide-field lens a fast and secure control of the printing plate is assured.

COLOR PROOF STATION

Color Proof Stations have been used for decades in quality control for printing. Forward-looking light-technology for all print sizes (20 x 28" to 47 x 63") and numerous trim levels provide a perfect, comfortable quality control of proof and production printing.

Color Proof Stations are equipped with JUST daylight 5000 proGraphic ISO 3664:2009 fluorescent tubes, 6500K is available on request.

VIRTUAL PROOF STATION

Soft proofing is coming to the pressroom! JUST Virtual proofStation is the first press side viewing station that offers the unique computer controls to create an exact viewing environment match between monitors and press sheets.

Saves time and reduces costs with improved communication and coordination in the color decision process.

Virtual Proof Station includes the JUST USB Interface, a VESA monitor mount, ventilated computer cabinet and a keyboard and mouse tray. Built-in side walls and movable wheels make the Virtual Proof Station a complete solution for the soft proofing workflow.

Virtual Proof Top is the desktop version for space-saving integration into an existing viewing area.

The Virtual Proof Station is equipped with the latest, cost-efficient soft proofing on press technology and offers ISO 3664 compliant viewing conditions.

SOFTPROOF ON PRESS

Soft proofing at the press console.

At the press console there are two problems for softproofing:

1. Disturbing influence of ambient light
2. The size of the press sheet doesn't fit the monitor

JUST offers customized and modular solutions to printers to retrofit existing press consoles.

Custom-made control center housing.

Representation of an entire press sheet on multiple monitors.

The "Scroll" solution: movable monitor with position sensor for displaying zone by zone areas of the press sheet.

Customized soft proofing on press solution: To control the disturbing influence of ambient light JUST provides individually developed press console enclosures which are either mounted directly at the console or free standing around the console. Sheet format – screen size: JUST is offering two approaches: 1. For the use of multiple monitors side by side in order to display the complete sheet size at a glance JUST provides a stable crossbar with multiple VESA monitor mounts. 2. Some softproof software solutions are supporting the "scroll" version: where a monitor is moved on a "tracking rail" zone by zone, back and forth. The built-in position sensor enables the display to show the exact detail of the press sheet where the monitor is positioned.

STUDIO LIGHT SYSTEM 5000

JUST Studio Light Systems offer a complete solution for digital and analog photography. Fully equipped with flicker-free daylight lamps in a large format yet compact design. The ideal tool for "inhouse" photography.

The entire studio offers the user a complete solution, quick set-ups and an efficient working environment. The studio is ready in minutes and completely equipped with 3 lamps that are variably adjustable on mobile support arms. The studio surface is equipped with dimmable transmissive lighting. Worksurface height 32 1/4". Complete studio, including 3 lamps (2x/4x/6x55W) and backdrop. Please ask for further information.

Item. No. 8243

Camera Holder with swivel arm

Optional Camera Holder and swivel arm for stationary pictures without tripod.

Item. No. 92981

Laptop Holder with swivel arm

Optional Laptop Holder and swivel arm for immediate control of your set from your laptop display.

Item. No. 13094
